

The uEye family offers a wide range of high-quality, compact cameras, including an extensive software package which allows you to use the cameras in many different application areas. IDS provides training so that users can benefit from the full range of possibilities of an optimal programming and integration of their uEye cameras. In addition to the training session you also have the opportunity to meet and exchange ideas with our team of engineers.

Course content

- hardware: interface basics, camera features, operational modes
- software: uEye demo, introduction in SDK, practical training in SDK programming (in VC)
- applications: use of several cameras, triggering of the camera, functions like Autofeatures Global Flash Option, etc. and current problems in your environment/business
